

The Cypher Wheel requires little maintenance. Just clean as needed with normal furniture polish/cleaner products. If the wheel begins to bind up or feel sticky, it's ok to lubricate it with a small amount of gel type oil on a Q-tip around the edge of the inner wheels. Don't force the wheel to turn if it is stuck, as you break off the thumb tab in the process.

Do not expose to heat. For example don't leave your Cypher Wheel in a hot car, or in direct sun light as this may cause the wood to warp...

The Cypher Wheel is "water resistant" as a poly sealer has been applied to the wood, but it is not "water proof." Excessive moisture could also cause the wood to warp.
